ISLANDER
CYBER SOCIETY

You are defending this VM. The red automation starts after the round begins.
Your first `blueteam` SSH login starts a short grace window, then arms the red timer unless creative mode is enabled.

Use the `blueteam` account for administration.
The `student` account is intentionally weak and should be investigated.
If red gains the right credentials after a foothold, it may begin stopping official services.

Rules:
- Work only on this blue VM.
- Do not wipe or reinstall the OS.
- Keep your own access working.
- Harden SSH, local accounts, exposed services, and firewall rules.

Useful starting point:
  cat ~/LAB-README.txt
```

```
Local status checklist:
  sudo lab-status

Creative mode:
  sudo creative-mode on disables red automation for this pair immediately
  sudo creative-mode off keeps red off until the next blueteam login starts a new round
  sudo creative-mode status shows whether red is currently disabled for your pair
  if you already want a red-free restart, use: sudo reset-lab --creative

ICS Store:
  http://100.70.173.91:8081/
  fallback: http://blue-pair-03.tail011da.ts.net:8081/

Service availability board:
  http://100.70.173.91:8088/
  fallback: http://blue-pair-03.tail011da.ts.net:8088/

To start this exercise over:
  sudo reset-lab
  or for a red-free restart: sudo reset-lab --creative

The reset command rolls back this blue VM and its paired red VM, then restarts the round.
Reset usually takes about 1 minute.
Your SSH session will disconnect; reconnect after the blue VM finishes rebooting.
After a normal reset, the next `blueteam` login starts a short grace window and then arms a fresh red timer.
After a creative reset, the pair comes back with red automation already disabled until you run `sudo creative-mode off`.
Last login: Wed Apr  8 08:16:43 UTC 2026 from 192.168.50.1 on pts/0
blueteam@blue-pair-03:~$
```

```

blueteam@blue-pair-03:~$ sudo lab-status
Blue Lab Status
===============

This is a local blue-team checklist. It does not inspect the attacker VM.

Round state          WAIT   first login grace window active; timer arms in about 0s unless creative mode is enabled
SSH service          WARN   tcp/22 is listening
HTTP portal          OK     tcp/80 is listening
ICS store            OK     tcp/8081 is listening
FTP service          OK     tcp/21 is listening
SMB share            OK     tcp/445 is listening
Service dashboard    OK     tcp/8088 is listening
Training app         BAD    tcp/8080 is listening
HTTP portal service  OK     apache2 is running
Store database       OK     mariadb is running
FTP daemon           OK     vsftpd is running
SMB service          OK     smbd is running
Dashboard service    OK     service-dashboard is running
Training app service BAD    blue-lab-app is running
Tailscale service    OK     tailscaled is running
Fail2ban service     OK     fail2ban is running
SSH password auth    WARN   enabled; remove weak accounts or disable after confirming key/Tailscale access
SSH root login       OK     disabled
Weak account student BAD    password enabled; groups: student
HTTP backup leak     BAD    credential file present under /var/www/html/backups
Store note leak      BAD    store recovery note is present in an exposed service path
Store legacy search  BAD    legacy search compatibility is enabled
Store weak account   BAD    storeclerk default password is still enabled
FTP credential leak  BAD    credential file present under /srv/ftp/public
FTP weak account     BAD    backupftp password is enabled
Service ops account  BAD    svcops password is enabled and can stop official services
SMB guest access     BAD    public share allows guest access
Blue-team sudo       OK     blueteam is in sudo
Firewall             WARN   Status: inactive
Compromise markers   OK     none of the known exercise markers found
Recent SSH failures  OK     none seen in the last 30 minutes
Recent UFW blocks    OK     none seen in the last 30 minutes

Colors are scoped to this exercise's current red-team paths:
green means OK, orange means warning/not ideal, red means critical/exploitable, purple means confirmed compromise evidence.
Use this as a guide, not a score. Re-run after each hardening change.
To restart the pair, use `sudo reset-lab` or `sudo reset-lab --creative`.
To toggle red-free practice for this pair, use `sudo creative-mode on|off|status`.
blueteam@blue-pair-03:~$
```

Use the IP for the VM in YOUR tailnet to access sites in browser:
